Calian MaestroEDE

Exercise Design, Development and Delivery Software Solution

Training today's leaders for tomorrow's challenges.

CALIAN ®

Military organizations are continuing to seek value and efficiency in building and conducting their large full-scale, complex, training events to prepare alliance force Headquarters for operational readiness.

It can be daunting to manage and maintain control over the exercise development process from start to finish. Many of today's high-value, no fail training exercises include a multitude of cross organization objectives, hundreds and sometimes thousands of participants from multiple agencies from multi-level jurisdictions and located at dispersed locations.
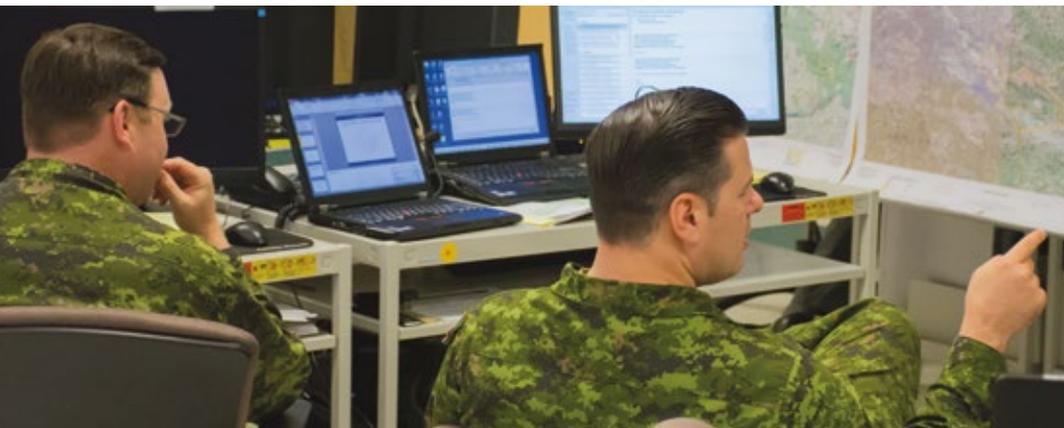

As the training becomes more complicated, the traditional tools and processes become inefficient and labour intensive.

…but this doesn't have to be the case

Introducing…
Calian MaestroEDE

Calian MaestroEDE™ supports the exercise design, development and delivery process (E3D) for complex, high fidelity and large scale exercises in preparation for:

- Military operational readiness
- Whole of government and International Events
- National disasters
- Security – G7/G20/large sporting events
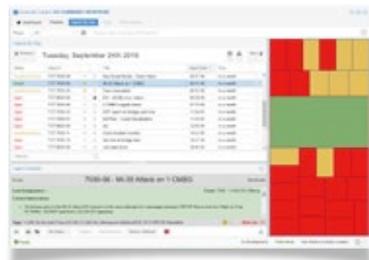

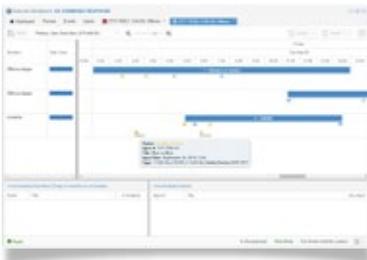

What is Calian MaestroEDE?

MaestroEDE (Maestro Exercise Development Environment) is a web based tool aimed at providing efficiency, flexibility and control to exercise leaders and developers throughout the life cycle of an exercise. Available as software as a service (SaaS) or on-premise in a standalone, secured environment.

This is a second generation tool built on the experience of its predecessor and was designed with the future in mind. We rely on it ourselves to deliver high-value training, and so can you.

- Assists Exercise Planners and Developers
- Enhanced training outcomes
- Eases management and control
- Facilitates larger complex exercises
- Allows development at any time or place
- Central repository of information

Key Features

- Drag and drop timelines
- Functional injects
- Timezone shifting
- Manage organizational trees
- Manage training objectives
- Micro-service architecture

- Manage users and roles
- File management
- Injects by day
- Document generation
- Commenting
- Rich web API for integration
